

STAND ALONE RADIATION THERMOMETERS

A range of stand alone thermometers answering the needs of OEM's, plant designers and process operators for a rugged, low cost temperature sensor which will integrate directly into a 4 to 20mA measuring, monitoring or control loop.

UNO is a new range of industrial radiation thermometers from the market leaders Land Infrared. UNO has been developed utilizing experience gained from fifty years of providing temperature measurement solutions to a wide range of industries throughout the world.

The UNO range of thermometers is designed to satisfy all OEM requirements and has a wide selection of infrared radiation thermometers available.

Each series of thermometers offers a choice of built-in time functions - peak picker or averager; and a range of temperature spans and operating wavebands to ensure optimum accuracy of measurement for the chosen industry and application.

The standard range of UNO thermometers feature precision through-the-lens sighting with focusable optics, which guarantees exact viewing and measurement of the smallest of target areas.

The Fibroptic UNO thermometers can incorporate an optional laser targeting system for precise alignment.

No other method of temperature measurement offers the benefits of infrared radiation thermometry.

UNO non contact thermometer systems measure continuously the temperature of hot, moving or inaccessible materials accurately and safely at a distance. The thermometers do not require contact with the target object, so they cannot interfere with, damage, or contaminate the product or process.

UNO thermometers do not remove heat or disturb the process being monitored and offer the only solution when the product is small, fragile, or in a vacuum or controlled atmosphere.

HIGH PRECISION NON FOR TOTAL INDUSTRI

SYSTEM FEATURES

UNO is a new range of high precision stand-alone non contact temperature measurement systems which benefit from a rugged and versatile design, extensive range of optional accessories, and traceable calibration coupled with exceptional accuracy and reliability.

- Range of standard through-the-lens sighting thermometers
- Range of fibroptic thermometers with optional laser targeting system
- Comprehensive range of thermometer mountings and accessories for complete environmental protection
- DIN-rail mounted power supply unit DPU (optional)
- LANDMARK Indicator LMi digital panel meter (optional)

Standard bodied UNO thermometer with through-the-lens sighting

Fibroptic UNO thermometer with optional laser targeting

CONTACT TEMPERATURE MEASUREMENT AL PROCESS MONITORING AND CONTROL

THERMOMETERS

- Industry standard 4 to 20 mA linear output
- Choice of standard or fibroptic thermometers
- Accurate, reliable, driftfree measurement
- Traceable calibration, built within ISO 9001 QMS approval

Simple trimpot controls are used to suit the application

- To set emissivity/non greyness for the material being measured
- To set the time function peak or averager
- To set the averager time constant or peak picker decay rate

Selectable peak picker/averager time functions

Emissivity or non-greyness compensation controls

MOUNTINGS AND ACCESSORIES

A complete range of protection and mounting accessories is available which provides full mechanical and thermal protection for the thermometer to ensure continuous service with minimal maintenance in almost any environment.

For further details request brochures S4MA and S4FA.

Thermometer Accessories (S4MA)

LANDMARK - LMi

Fibroptic Accessories (S4FA)

An optional digital indicator provides a temperature display. LMi is 1/8 DIN size with 14.2mm/0.55in display and dual hi/lo alarm outputs.

LANDMARK Indicator - LMi

APPLICATIONS

UNO thermometer systems are designed for OEM installation where continuous operation, quality control and process monitoring are plant management requirements.

The rugged and versatile design satisfies end users in a wide range of industries including.

- Hot rolling
- Heat treatment furnaces
- Glass manufacture and processing
- Electrical and electronics
- Induction heating
- Foundry and forging
- Mineral processing
- Petrochemicals

The photograph below shows heat treatment of automotive components on an induction heating machine.

DIN-RAIL MOUNTED **POWER SUPPLY UNIT**

The optional DIN-rail mounted power supply unit DPU provides the d.c. voltage which UNO thermometers require.

supply unit - DPU

Thermometers offer exceptional flexibility with a choice of single wavelength, ratio, fibroptic and fibroptic ratio models.

Thermometer type, temperature range, spectral response and optical characteristics are chosen to suit the particular application.

RADIATION THERMOMETERS

The thermometers utilize proven reliable electronics combined with a high quality optical system to provide accurate, dependable temperature measurement.

They are housed in a rugged die cast body with a high quality electrical connector to provide reliable performance.

The single wavelength and ratio thermometers all feature through the-lens sighting with a 6° field of view. Adjustable focus with a circular graticule gives precise alignment on to the smallest of targets.

Two optical variants are available: Standard and Short-focus. Close focus lenses are also available permitting measurement of targets as small as 0.45mm/0.017in. Ask for separate leaflet for full information.

FIBROPTIC THERMOMETERS

Fibroptic thermometers utilize a flexible fibre optics light guide enabling the detector and electronics enclosure to be located in a less hostile environment.

The fibroptic thermometers are available with an optional built-in laser targeting system which defines the target spot for accurate sighting.

The use of fibre optics permits viewing of normally inaccessible targets, where there are high magnetic fields or in high ambient temperatures up to $200^{\circ}C/400^{\circ}F$ without cooling of the optic head. There is a choice of three optic heads and three light guide lengths.

PEAK PICKER

The peak picker function is used when measuring the temperature of intermittent targets or where the hot target surface is obscured by cool areas such as scale on rolled steel.

The peak picker decay rate is adjustable from 1.5 to 30% of span per second.

The peak picker function can be reset from a remote switch connected to the DPU.

AVERAGER

The averager function is used to smooth unwanted variations or rapidly fluctuating changes in the thermometer signal to maintain a valid temperature reading.

The averager time constant can be adjusted from 5ms (U1 and U2 thermometers) to 5 seconds to give a smooth temperature display.

U1 Thermometers

U1 thermometers are intended for general purpose use in high temperature applications. They utilize a silicon cell detector, and operate at short wavelengths around $1.0 \mu m$ where emissivity errors are minimized. They have a fast response time of 5ms.

U2 Thermometers

U2 thermometers use the latest germanium detectors, and operate at a wavelength of $1.6\mu m.$ They extend the measurement range of short wavelength thermometers down to $300^\circ C/600^\circ F$ and have a fast response time of 5ms.

U4 Thermometers

U4 thermometers are used on low temperature, low or uncertain emissivity surfaces such as bright or unoxidized metals. They use a lead sulphide detector and operate at a wavelength of $2.4 \mu m$. They have a response time of 100ms.

U5 Thermometers

U5 thermometers are specifically designed for glass surface temperature measurement.

Fast speed of response, coupled with small target size and accurate sighting facility make it ideal for all flat glass, glass toughening and optical fibre preform applications.

V1 Ratio Thermometers

V1 ratio thermometers use dual silicon cell detectors operating at 0.85 to 1.1 μ m. They are intended for difficult, high temperature applications where the field of view is not fully filled or where the sight path is obscured. They can accurately measure temperature of targets with up to 95% obscuration.

Fibroptic U1 Thermometers

Fibroptic U1 thermometers combine the flexibility of fibre optics with short wavelength operation.

They can be used in high temperature applications such as metals, glass, coke ovens and induction heating.

Fibroptic U2 Thermometers

Fibroptic U2 thermometers can be used in applications such as glass mold temperatures where access to the target is restricted, or limited to a few milliseconds.

Fibroptic V1 Ratio Thermometers

Fibroptic V1 ratio thermometers provide accurate high temperature measurement of small intermittent targets such as rod and wire, and tube welding. Other typical applications include kilns and vacuum furnaces.

For fifty years LAND have supplied temperature measuring systems and instruments to many different industries all over the world. Now the world leader in non contact thermometry, our expert advice and support is never far away.

APPLICATIONS

LAND have solved many different temperature measurement problems in a wide variety of industries from food to atomic energy, some of which are listed below:

- Iron & Steel
- Heat Treatment
- Non-ferrous Metals
- Minerals
- Glass

- Petrochemical Power & Utilities
- Aerospace
- Electronics
- Pharmaceuticals
- Plastics
- Paper

For further information or free advice on specific temperature measurement problems within these or any other industry, contact your nearest Land office.

PRODUCT ASSURANCE

When you specify LAND products you are assured of receiving a completely pretested, calibrated working product. Each instrument is carefully checked to ensure complete compliance with specification and is fully guaranteed. LAND was the first manufacturer of infrared instruments to successfully obtain ISO 9001 Quality Management System Approval for both design and manufacture of non contact infrared temperature measuring equipment.

> UNO complies with current European directives relating to electromagnetic compatibility and safety (EMC directive 89/336/EEC; Low voltage directive 73/23/EEC).

The Quality Management System of Land Instruments International Ltd. is approved to BS EN ISO9001:2000 for the design and manufacture, stockholding, in-house repair and site servicing of non contact temperature measuring instrumentation. Associated software designed and developed in accordance with TickIT. Calibration certificates are available from our UKAS accredited Calibration Laboratory No. 0034. The Land calibration laboratory complies with the requirements of the international standard BS EN ISO/IEC 17025.
